CASKET-TRANSPORT	Casket Transporter: This is an allied attachment designed for our Toro Workman HD utility vehicles to transport caskets in cemetery applications. The stock cargo bed is removed from the vehicle and a small, yet strong and durable swivel base mounts to our frame that is heavy gauge tubing with thick, flat plate bar materials. This connection between the frame and the upper large box, that the casket slides into, has a 90 degree swivel that allows the box to swivel either direction. The inside of the box has rubberized rollers for easy casket insertion and contains a front stop and clamping device at the rear to help secure the casket during transport. This box also has a hinged, swinging rear door with a slide bolt to lock the door closed. The box is approx. 91" long, 32" wide and 34" tall. Install time is approx. 2 hours. Be sure to include Toro operator and passenger side mounted rear view mirrors to enhance all around visibility.	\$11,500.00
